

WATCHDOG 550 GUIDE: *How to Clean the Coils*

Tools:

Self-Rinsing, Foaming Coil Cleaner (such as WEB Coil Cleaner)

1. First, slide out the filter from the back of the machine to reveal the coils. Set the filter aside.

2. Next, evenly spray the coils with the coil cleaner.

3. That's all you have to do. There's no need to rinse the coils because when you start using the unit again, the dehumidification process will do that for you.

4. Repeat this process once a year.
